

Adobe Analytics - Shared Dashboard Sorting

Our organization uses dashboards to convey relevant reporting to key stakeholders. The analytics reporting team builds and maintains dashboards that other management users access to keep in touch with feature and segment performance. However, the number of shared dashboards that we manage actively means that it is difficult to locate specific dashboards in the manage dashboard window because they are not currently organized at all. The ability to sort by name, by creator, by date last updated, or store in relevant folders would be a HUGE improvement for this feature.
