

Ad Hoc Analysis Search available in Workspace

Hi

I am one of the people who still use Ad Hoc more than Workspace. I do like Workspace, but there is one main reason for my love to Ad Hoc.

When I search within my thousands of segments, it does not matter whether I write "Car sale" or "Sale Car" as search phrase in Ad Hoc. It will find the stuff nevertheless.

In Workspace I have to remember exactly what order my segments are named.

This is such a big difference for someone playing around with thousands of segments. I do have namestructures on them, but the order can be difficult to recall at times. Did I put the "." before or after "Sweden" for example.

Anyway. Please update the workspace search box so that it does this as well as Ad Hoc

Michael
