

# Contact form widgets and more widgets required!!!!

---

Adobe Muse is a nice alternative for designer than Dreamweaver!!!

1) It would be nice to have several 'Contact Forms' in the Widgets Library, which when you publish the site it creates a php file for it.

2) The Widgets Library is a bit basic, but its a good start! just need more and more of them!

The BBC website uses lots of cool effects, which would be nice to see in Muse
