

Line Tool Please

NO LINE TOOL?

Please provide us with this most primal drawing tool.

A line tool is the most basic of drawing tools... Forcing us to use "rectangle tool" as a work around... is nothing but a KLUDGE, and causes issues with designs when you upgrade Muse and change the rectangle tool functionality (See "Drop Shadow", Issue, Below).

Drop Shadow Issue In Muse v2.0

For a vertically drawn line, the drop shadow in v1.0 operated like a "line", with the shadow being defined in relation to the drawn line.

In v2.0, the drop shadow is drawn in relation to the opposite edge of the rectangle, instead of from the drawn line. (Picture a vertical line in a 10px-wide rectangle. The line is at px1 but now, the dropshadow is drawn at px10).

This undocumented change forced me to go in and manually modify ALL my lines with this dropshadow effect.

Because drawing a simple line is a Kludge, can we expect yet another functional change as you modify the rectangle tool for rectangles, but not for lines...?

It's hard to believe this has been released from beta, without this primal feature.
