

Bug: Editor - Strange line breaking

This occurs from pasting content into the editor to BC's toolbox modules being inserted.

If you insert the comments - comment form for example, the form html itself does not wrap, it line breaks...

```
<form name="catratingform55507" onsubmit="return checkWholeForm55507(this)" method="post"
  action="/RatingProcess.aspx?OID={module_oid}&OTYPE={module_otype}">
```

Rather then being..

```
<form name="catratingform55507" onsubmit="return checkWholeForm55507(this)" method="post"
action="/RatingProcess.aspx?OID={module_oid}&OTYPE={module_otype}">
```

When it comes to content, they have /n breaks throughout, which is a pain to tidy up.
