

Bug: Collection / template - Modules not working/issues

I will update as I can find them..

```
{module_productfeaturelist render="collection" tag="YourTag" rowCount="3" sortType="Weight" template="/_System/CustomLayouts/newlist.tpl"}
```

This still renders the wrapping:

```
<ul class="productfeaturelist"><li class="productItem" id="catProdTd_9136887"></li><li class="productItem" id="catProdTd_9
```

```
{module_searchresults render="items|collection" targetFrame="_blank" resultsPerPage="20" characterLimit="440" emptySearchResultString="No results found"}
```

This does not seem to work collections

Update 1:

```
{module_categorylist
```

This does not seem to support render="collection" Collection="mycollection" template="yourtemplate.tpl" Not passed into template and will render its default output of option fields.

Collection="mycollection" template="" render="collection" renders results inline
