

Bug: Editor - Module in table

This may need to be reported to the editor developer.

If you do the following:

```
<table class="w640" width="640">
  <tbody><tr>{module_webapps id="23399" filter="all" resultsPerPage="100" hideEmptyMessage="true"}</tr></tbody>
</table>
```

And save a page/layout/webapp/Email Campaign in the admin the editor reformats it to:

```
{module_webapps id="23399" filter="all" resultsPerPage="100" hideEmptyMessage="true"}
<table class="w640" width="640">
  <tbody></tbody>
</table>
```

The old editor suffered the same issue as a note. Not sure if your able to fix that or not.
