

# Analysis Workspace - Save Visualization to reuse

---

I'd like to be able to save pre-built visualizations to use in other projects. To start with, Freeform Tables would be the biggest need (some other types may lend themselves, some may not).

For example, I may built a table using video name, video start, video 25%, 50%, 75% and complete. That requires me to find a dimension and 5 metrics every time. I'd like to be able to save this table, then have a new option in the workspace menu on the left to find and reuse these.

Advantages:

- \* Saves users time building the same tables they use often.
- \* As an admin, I'd like to be able to share popular "widgets" out to users. This would particularly help newer users as they could bring in pre-built pieces that they want to use rather than attempting to figure out what variables go with what.
